

Can-production tools

We have over 40 years of expertise in the manufacture of packaging tools for tinplate, and have continuously adapted our designs to our customers' needs.

Our solutions are characterized by the high precision of the entire tool-design.

Using an exact guidance of the tool parts and using the best materials, including optimum heat treatment, our tools obtain very large

production numbers.

Due to the sophisticated design a minimum of maintenance costs are ensured.

We have many years of experience in producing tools and machine parts for Peel-Off machines, and we have also optimized and manufactured finger-hole tools with great success.

In addition to this we also have extensive experience in the manufacturing of tools for Penny Lever Lids (Ring + pressure cap)

Another specialty are Twist-Off tools for the manufacture of screw caps for glass (Twist-caps).

Specialist supplier to the pharmaceutical industry
